

Deadline: 1 week

Task:

The Board Room module will be extended with a new functionality - Board Meetings - according to the attached file.

Create a fragment of the New meeting screen that will contain the following elements:

- Meeting type
- Meeting name
- Date and Time
- Location
- Invites

Make sure the style is consistent with the rest of the application. You can (but don't have to) use Storybook to make your job easier. Try to show your cross-sectional knowledge. You can make selected fragments more elaborate than you would in a real application, if you want to show some fragment of knowledge that did not appear naturally. Others you can make more simplistic than you would really do if they don't add anything new. If something is not clear and normally you would ask someone about it, you can make whatever assumptions you like, that may not have anything to do with reality, but be aware of them. An example of such an assumption may be the answer to a potential question: can there be other Meeting Types than those listed in the future?

Share your solution with us so that we have access to the code + effect. During the interview you will tell us about individual elements of the view/fragments of the code, what challenges you thought about (more important), what assumptions you made (less important) and what was the result of this assumption (more important).

Technologies to be used:

- Angular
- Angular Material
